

MOBILE SALES ANALYTICS

Power BI Project Documentation

Tools: Excel • Power BI • Power Query • DAX

Dashboards: Overall Sales • MTD Report • Same Period Last Year

1. Project Overview

Mobile Sales Analytics is a Power BI business intelligence project built from an Excel transaction dataset. It provides three reporting views: overall sales performance, Month-to-Date (MTD) tracking, and Same Period Last Year comparison.

Dataset Snapshot

Metric	Value	Metric	Value
Transactions	3,835	Total Units	19,150
Total Sales	■769.20M	Average Price	■40,114.04
Brands	5	Mobile Models	15
Cities	19	Payment Methods	4
Years Covered	2021–2024	Sales Logic	Units Sold × Price Per Unit

Business Objective

Monitor sales KPIs, identify high-performing products and locations, understand payment and customer-rating patterns, and compare performance across time.

Skills Demonstrated

Excel data import • Power Query • Data cleaning • Data modeling • DAX • KPI cards • Slicers • MTD • Same Period Last Year • YoY comparison • Geographic and trend analysis

2. Dashboard 1 — Mobile Sales Dashboard

Purpose: Overall sales performance with filters for Mobile Model, Payment Method, Brand and Month.

Total_sales by City

Total_quantity by Month

Ratings by Rating status

Transaction by Payment Method

Brand

Total_sales

Transaction Tot

Apple	161615730	783
OnePlus	153719439	768
Total	769204988	3835

Total_sales by Mobile Model

Total_sales by Day Name

Dashboard 1 — KPI & Visual Documentation

KPI	What it shows	Business question
Total Sales	Total sales value under selected filters	How much sales value has been generated?
Total Quantity	Total mobile units sold	How many units have been sold?
Transaction	Number of sales transactions	How many transactions were completed?
Average Price	Average selling price per unit	What is the average price of mobiles sold?

Visual-by-Visual Documentation

Visual	Why it is used	Business questions
Total Sales by City — Map	Shows geographic sales distribution and location differences.	Which cities generate the most sales? Where are sales concentrated?
Total Quantity by Month — Line	Highlights changes and trends in unit sales over time.	Which months have higher unit sales? Are there seasonal fluctuations?
Ratings by Rating Status	Groups ratings into Good, Average and Poor for easier interpretation.	What is the customer rating distribution? How significant are poor ratings?
Transaction by Payment Method — Pie	Shows the share of transactions across payment channels.	Which payment method is used most frequently?
Total Sales by Mobile Model — Bar	Ranks models by sales and makes comparison straightforward.	Which models generate the most sales?
Total Sales by Day Name	Shows weekly sales behavior.	Which days generate higher sales?
Brand Performance Table	Provides brand-level sales and transaction detail.	Which brands contribute most to sales?

3. Dashboard 2 — MTD Report

Purpose: Track Month-to-Date sales progression for a selected year. The supplied dashboard is filtered to 2022.

MTD Explanation

MTD (Month-to-Date) measures cumulative performance from the beginning of the month through the selected date. It helps management monitor how quickly sales are building before the month is complete.

Business Questions

Question	Why it matters
How quickly are sales accumulating during each month?	Tracks sales pace.
Which months reach higher sales levels?	Identifies stronger periods.
Are some months consistently stronger or weaker?	Highlights recurring patterns.
How is current monthly progress developing?	Supports ongoing monitoring.

Filters: Mobile Model • Payment Method • Year • Month

4. Dashboard 3 — Same Period Last Year

Purpose: Compare the selected year's performance with the corresponding period in the previous year. The supplied dashboard compares 2023 with 2022.

Same Period Last Year Analysis

2023 sales were approximately ■253.31M compared with ■261.99M in 2022. The difference was approximately ■-8.68M (-3.31%).

The dashboard compares performance at three levels:

Level	Business question
Year	How does the selected year compare with the previous year overall?
Quarter	Which quarters show the largest year-over-year change?
Month	Which individual months improved or declined?

5. Business Question Bank

Area	Questions
Sales Performance	What is total sales? • How many units have been sold? • How many transactions occurred? • What is the average selling price? • How are sales changing month by month?
Product Analysis	Which brand generates the highest sales? • Which mobile model generates the highest sales? • Which models sell the highest quantity? • How does brand performance vary over time?
Geographic Analysis	Which city generates the highest sales? • How are sales distributed geographically? • Which cities have comparatively lower sales?
Customer Analysis	What is the customer rating distribution? • What percentage of ratings are Good, Average and Poor? • Does rating vary across products or locations?
Payment Analysis	Which payment method is most frequently used? • How does transaction volume differ by payment method?
Time Intelligence	What is the MTD sales trend? • How does the current year compare with the previous year? • Which months or quarters show the largest year-over-year change?

6. Key Dataset-Based Observations

Brand Sales

Brand	Sales
Apple	■161.62M
Samsung	■160.04M
OnePlus	■153.72M
Vivo	■150.08M
Xiaomi	■143.75M

Highest-sales city: Delhi, with approximately ■203.88M in sales.

Top Mobile Models by Sales

Mobile Model	Sales
iPhone SE	■59.57M
OnePlus Nord	■57.89M
Galaxy Note 20	■56.01M
Vivo Y51	■54.84M
Galaxy S21	■53.27M

Payment mix: UPI is the most frequently used payment method in the source data.

7. Interview Explanation

Tell me about your Power BI project.

I created a Mobile Sales Analytics dashboard in Power BI using an Excel transaction dataset. I built three dashboards: an overall sales dashboard, an MTD report and a Same Period Last Year analysis. I used Power Query for data preparation and DAX for KPI and time-based calculations. The dashboards track sales, quantity, transactions and average price, along with brand, mobile model, city, payment method, customer ratings and monthly trends.

Why three dashboards?

Each dashboard addresses a different business requirement: overall performance, month-to-date tracking, and comparison with the corresponding period of the previous year.

Why MTD?

MTD tracks how sales accumulate within the month and allows management to monitor progress before month-end.

Why Same Period Last Year?

It provides a like-for-like comparison with the corresponding period in the previous year and helps identify changes over time.

8. Final Project Summary

Mobile Sales Analytics demonstrates how Power BI can transform transaction-level data into an interactive business intelligence solution. The project covers sales KPIs, product performance, geographic analysis, customer ratings, payment methods, MTD tracking and year-over-year comparison.

Key Skills: Power BI • DAX • Power Query • Excel • Data Cleaning • Data Visualization • Time Intelligence • Business Analysis

GitHub project description: Interactive Power BI dashboard analyzing mobile sales performance using Excel data, with overall KPI reporting, MTD analysis and Same Period Last Year comparisons.
